Subject: Application for Senior Next.js/Full-Stack Role (Remote - Hurghada)

Dear Talent 360 Recruitment Team,

Thank you for requesting my CV. Attached is my technical overview.

As mentioned in my initial outreach, I am based in Hurghada and highly interested in your remote Full-Stack opportunities. My transition from 20 years of heavy industrial systems engineering into modern web architecture gives me a unique advantage: I build software with the rigorous discipline of an engineer, not just a coder.

I am looking for an environment where complex problem-solving and scalable architecture are the priority. I look forward to discussing how my systems-thinking approach aligns with your current projects

Best Regards,

Sherif Seif
