VISUAL SYSTEMS ARCHITECT & FULL-STACK ENG.

011-455-511-63

Hurghada, Egypt | Remote

Website

Portofolio

Overview

SeniorSystems Engineer transitioning two decades of industrial logic into modern web architecture and AI automation. I specialize in bypassing 'React bloat' using agentic AI workflows, Next.js 15, and real-time database infrastructure. I don't just write code; I engineer scalable, high-retention digital systems. Expert in building decoupled, headless frontend architectures (Next.js/React) designed to consume and integrate seamlessly with complex RESTful APIs and Enterprise Backends (Node, Python, .NET).

Work Experience

Founder & Visual Systems Engineer

(2021- Present) Freelancer/GlobeVistaHub

- Tech Stack: WordPress, WooCommerce,
- Paymob API, n8n, Vanilla JS, graphics design
- Execution: Architected a high-trust, bilingual booking pipeline designed to intercept European travelers. Integrated custom LTR/RTL routing and automated CRM delivery sequences to maximize conversion rates.
- Video editing & motion graphics for high retention different sizes video productions.

General Production Logging Engineer & Project Manager

(2000 - 2020)Multinational Oil & Gas (Baker Hughes, Weatherford, Halliburton)

- Managed highly complex, multi-million-dollar telemetry systems in high-pressure environments across the Gulf region.
- Translated raw sensor data into actionable operational directives for top-tier clients like ARAMCO.

Education

IT & Computer Science Diploma

(1999 - 2000) Arab Academy for Science & Technology

B.Sc. Communication Engineering

(1995 - 1999) Arab Academy for Science & Technology, Faculty of Engineering

Skills

- Frontend Architecture: Next.js 15/16, React 19, TypeScript, Tailwind CSS, JavaScript (ES6+), HTML5/CSS3.
- Backend & Databases: Python, Supabase (PostgreSQL), Firebase, SQLite.
- AI & Automation: Google Gemini API, n8n, Twilio (WhatsApp API), Streamlit.

- Visual Engineering: DaVinci Resolve (Fusion Node-Based VFX), UI/UX Design (Google Stitch, Figma), Motion Graphics.
- Methodology & AI Coding Tools: Cursor AI, Antigravity, LLM-Assisted Development, CI/CD Deployment (Vercel, GitHub).

Current Projects In Progress

AI Facility Management Dispatcher (SaaS Prototype)

- Role: Lead Architect & Developer
- Tech Stack: Python, Next.js 15, Gemini API, Supabase (WebSockets), Twilio.
- Execution: Engineered an end-to-end system that intercepts natural-language Arabic WhatsApp audio/text, classifies emergencies via LLM, and updates a secure, dark-mode Next.js dashboard in real-time using Supabase WebSockets.

High-Frequency Live Sports Application

- Role: Mobile Systems Architect
- Tech Stack: Flutter, Supabase (PostgreSQL), Firebase Cloud Messaging, External Sports AP Is.
- Execution: Architecting a cross-platform mobile application designed for zero-latency live score updates and real-time chat. Utilizing Supabase for relational data structures (Leaderboards/Predictions) and Firebase for instantaneous push notifications, bypassing traditional API bottlenecks.

The Vista Booking Engine (Enterprise SaaS)

- Role: Visual Systems Engineer
- Tech Stack: Next.js 16, React 19, TypeScript, Tailwind CSS, Supabase (PostgreSQL), Clerk, Paymob, n8n.
- Execution: Architected a zero-commission, end-to-end luxury booking SaaS. Developed a custom Glassmorphism UI with programmatic 3D motion graphics. Integrated a real-time multimodal AI Voice Concierge (Gemini 3.1 Flash/ElevenLabs) and orchestrated automated WhatsApp/PDF CRM pipelines via n8n.
