SUBJECT: Application for Senior Systems Architect / Full-Stack & 3D Spatial Engineer

I am writing to express my strong enthusiasm for joining your engineering organization. Bringing over two decades of mission-critical industrial telemetry and sensor networks engineering (Baker Hughes, Halliburton) into modern web architecture, I design decoupled, resilient, sub-second web platforms engineered for enterprise scale, strict type-safety, and zero downtime.

My core architecture bridges strictly-typed, headless frontend frameworks—**TypeScript, Next.js 16 (App Router, Server Actions), React 19, and Three.js 3D Spatial Web (WebGL)**—with real-time cloud backends (**Supabase / PostgreSQL WebSockets, Row-Level Security**) and event-driven automation pipelines (**Google Gemini API, n8n webhooks, Stripe/Paymob**). Whether engineering photorealistic 3D WebGL vehicle staging or end-to-end luxury booking workflows, I eliminate architectural bloat to deliver reliable, fault-tolerant user experiences.

Featured Live Production Architectures & Code Showcases:

- **The Vista Booking Engine (Enterprise SaaS):** https://the-vista-booking-engine-vb2y.vercel.app
  Full-stack TypeScript & Next.js 16 luxury booking platform, featuring dark-mode Glassmorphism, bilingual routing, and Paymob payment integration.
- **Interactive 3D Spatial Web Application:** https://auto-bath-detailing-melbourne.vercel.app/showcase
  Photorealistic 3D automotive WebGL experience with procedural materials, orbital camera physics, and Stripe multi-tier checkout.
- **Interactive Studio & Optical Engineering Pipeline:** https://auto-bath-detailing-melbourne.vercel.app/studio
  Live interactive DaVinci Resolve Fusion node tree demonstrating broadcast color science and vectorscope telemetry.
- **Engineering Hub & Studio:** https://www.goodbrains.pro
  Official commercial studio portfolio spanning AI systems and creative technology.

I thrive in fast-paced, high-standard engineering teams where architectural rigor, clean code, and execution speed are paramount. I would welcome the opportunity to discuss how my systems engineering foundation and modern full-stack toolkit can deliver immediate impact to your product roadmap.

Sincerely,

Sherif Seif Eldin
Senior Systems Architect & Full-Stack Engineer
